

Hamina LNG Pre-Open season questionnaire

Hamina LNG Oy is preparing for the start of the commercial use of the Hamina LNG Terminal in October 2022. In order to plan the commercial operations of the first gas year at the terminal, Hamina LNG is willing to gather preliminary interest from the market for the reservation of terminal capacity. There is readiness to start the Open Season (annual Capacity Allocation Process) latest in the beginning of August. This questionnaire is non-binding to all parties involved.

Hamina LNG kindly requests preliminary information on the potential interest for capacity booking at the terminal. The information can be divided per service, as indicated in the table below. If you don't have closer information on the capacity needs per service, please prioritize the Storage and HP Injection Service capacities. Please note that the capacities indicated here are non-binding and the official Open Season will be performed completely separate from this preliminary questionnaire.

The current Terminal rules and tariffs can be found on the Hamina LNG web page (<https://www.haminalng.fi/materials/>). The rules and tariffs are in force until 30.9.2022. Before the beginning of Open Season for the gas year 2023/24, the Energy Authority will approve the new tariffs for a period of maximum two years. The current rules define the terminal service structure at the moment, but some changes are already foreseen in the Terminal. There is a preliminary plan to increase the current capacity of the injection service into the natural gas transmission network (HP) from approx. 1,5 TWh to 3 TWh within Fall 2022. This increase would be performed at the expense of the injection service into the natural gas distribution network (LP) which would mean that the LP injection service would no longer be available for use. Even further capacity increase in the HP injection service capacity is possible in the future, which is why the gas year 2023/24 is also indicated in the table below to scope interest for increasing use in the service.

Answers to this questionnaire are expected by May 13th 2022.

The answers with the table below filled can be sent to the e-mail address sales@haminalng.fi

Interest in Capacity Allocations						
		2022	2023			Gas year
		Q4	Q1	Q2	Q3	1.10.2023 - 31.9.2024
Required						
Storage Service Capacity ¹	m ³					
Proposed Minimum Capacity ²	m ³					
HP Injection Service Capacity	MWh					
Optional						
Truck Loading Capacity ³	MWh					
	m ³					
	tonnes					
LNG Bunkering Capacity ³	MWh					
	m ³					
Ship Loading	pcs					
Ship Unloading	pcs					

¹ According to the terminal rules, the minimum booking capacity is 1000 m³. Please notice that the tank capacity booking is done on an annual basis.

² If the operator is required to limit the capacity due to overbooking, please estimate a minimum capacity that you would require.

³ Choose a suitable unit.
